OVERVIEW

This is not your typical “ear set”... Brought to you by JK Audio, a leader in broadcast communications, the BSET-HS1 wireless headset gives you freedom to move without sacrificing quality or comfort. With the look and feel of a full-size headset and the portability of *Bluetooth* wireless technology, the BSET-HS1 is unrestrained by compromise. No trade-offs, and nothing is left hanging in the balance.

There are many attributes that contribute to the performance of a headset equipped with *Bluetooth* wireless technology. Extended Range, voice quality, comfort and battery life are key to designing a great headset. BSET-HS1 positions the noise canceling mic right where it needs to be in order to receive the best signal quality. It's no secret. Put the mic where it belongs and you get better, more natural sounding audio without excessive signal processing. Take it wherever you go. The noise canceling mic blocks out crowd and road noise letting you listen in comfort. You will enjoy the comfortable ear cushion and headband common to Call Center headsets. Weighing in at less than only 2 ounces, you might forget that you're even wearing it.

Our new BSET-HS1 is a perfect match to your mobile phone or any *Bluetooth* wireless technology enabled device that supports the *Headset* profile. Treat yourself and connect to your computer for VoIP applications such as Skype™. We can't promise great distances with thousands of models of mobile phones when the phone may be the limiting factor. However, we CAN promise excellent sound quality, extended range and a comfortable fit.
