CellTap Wireless Telephone Tap

Users Guide

Telephone Interface Products

Connections

Connect CellTap between the 2.5 mm earpiece jack of your cell phone and your earpiece or headset. Now connect a tape recorder or powered speakers to the 3.5 mm mini jack. This audio output contains a nice mix of both sides of the conversation.

To recorder or
powered speakers

Description

Group Listen - Simply connect a powered speaker to the audio output jack and you will have a new conferencing capability. Everyone in the room can hear your conversation, but only the person wearing the headset can talk to the distant party. While this is not a speakerphone, in many cases it is better.

Connections

CellTap must be used with an earpiece or headset. Your cell phone will not recognize CellTap on its own.

Although CellTap is designed to work with any cell or wireless phone that accepts a third party earpiece or headset, there are no standards for this connection and we cannot guaranty compatibility.

Note: Wireless phones generate substantial radio frequency (RF) noise during a call which can easily leak into audio cables or equipment. Be sure to keep the wireless phone one to two feet away from any audio cables or equipment. It is also important to keep the wireless adapter cord away from any other audio cords.

Specifications

Audio

Output:	Connector	3.5mm Mono Jack
	Output Impedance	600 ohms
	Level	100 mV RMS
