New Product Press Release – Last Minute Update Hold for NAB Release

***Bluetooth* Wireless Technology added to the new RemoteMix 4**

RemoteMix 4 Portable Broadcast Mixer

The new JK Audio RemoteMix 4 will route audio through cell phones and portables using *Bluetooth* Wireless Technology. This additional audio connection can offer up to 20 kHz audio bandwidth.

The *Bluetooth* interface on RemoteMix 4 will first attempt to connect in hands free mode to a cell phone, allowing 3.4 kHz telecom bandwidth. If this type of connection is not accepted, it will attempt to connect in wireless headphone mode to any product that allows a *Bluetooth* wireless audio connection. The wireless headphone mode offers 20 kHz audio bandwidth.

RemoteMix 4 is a four channel field mixer and headphone amplifier. More than just a field mixer, this is a communications interface. RemoteMix 4 features a phone line hybrid and keypad, a PBX handset interface, and a 2.5 mm cell phone interface, and now *Bluetooth* Wireless Technology. These parts were designed to work together and save setup time in the field.

Available July 2007 through authorized dealers.
